

Project Demo Planning

1. Introduction

The project demonstration is planned to present the **Smart Lender – Loan Eligibility Prediction System** in a clear and organized manner. The objective is to demonstrate how Machine Learning and Flask work together to automate the loan eligibility prediction process.

The demonstration focuses on the project workflow, application features, prediction process, and overall system performance.

2. Demo Objectives

The demonstration is planned to:

- Introduce the Smart Lender project.
 - Explain the problem statement and proposed solution.
 - Demonstrate the working web application.
 - Showcase the Machine Learning prediction process.
 - Highlight the project's key functionalities.
 - Present the benefits and future scope of the system.
-

3. Demonstration Agenda

Step Activity

- 1 Welcome and project introduction
- 2 Explain the problem statement
- 3 Present the proposed solution
- 4 Explain the system architecture
- 5 Demonstrate the Flask web application
- 6 Perform a live loan eligibility prediction
- 7 Explain the prediction result
- 8 Discuss project benefits and future enhancements
- 9 Questions and feedback

4. Demonstration Workflow

Project Introduction

Problem Statement

System Architecture

Flask Web Application

User Inputs Applicant Details

Machine Learning Prediction

Display Loan Approval / Rejection

Project Summary

5. Resources Required

Resource	Purpose
Laptop/Desktop	Run the application
Visual Studio Code	Execute the project
Python Environment	Run Flask application
Web Browser	Access the application
GitHub Repository	Display source code
Project Documentation Reference during demonstration	

6. Expected Outcome

The demonstration is expected to:

- Show the complete workflow of the Smart Lender application.
- Validate the integration of Machine Learning with Flask.
- Demonstrate accurate loan eligibility prediction.
- Highlight the usability and practical benefits of the system.

7. Conclusion

A structured demonstration plan ensures that every important aspect of the Smart Lender project is presented effectively. It enables evaluators to understand the system's objectives, implementation, functionality, and overall impact in solving the loan eligibility prediction problem.
