

**Project: Smart Lender – Loan Eligibility Prediction System**

**Customer Persona**

**Name:** Rahul Sharma

**Occupation:** Software Engineer

**Goal:** Apply for a personal loan with a quick and transparent approval process.

| Stage       | Customer Actions                                | Thoughts                               | Emotions               | Pain Points                 | Opportunities                  |
|-------------|-------------------------------------------------|----------------------------------------|------------------------|-----------------------------|--------------------------------|
| Awareness   | Learns about Smart Lender from the bank website | "Can I get a loan easily?"             | Curious                | Doesn't know eligibility    | Provide clear project overview |
| Application | Enters personal and financial details           | "Hope I entered everything correctly." | Hopeful                | Long forms can be confusing | User-friendly prediction form  |
| Processing  | Submits application                             | "How long will this take?"             | Anxious                | Waiting for results         | Instant ML-based prediction    |
| Prediction  | Receives loan approval/rejection                | "The result came quickly."             | Excited / Disappointed | Wants accurate decisions    | High-accuracy ML model         |
| Decision    | Reviews result                                  | "Now I know my eligibility."           | Satisfied              | Needs trust in the system   | Clear prediction explanation   |

**Customer Goals**

- Quick loan eligibility prediction
- Easy-to-use application
- Accurate results
- Reduced waiting time
- Transparent process

---

**Customer Pain Points**

- Manual loan verification is slow.
- Multiple bank visits.
- Long approval process.
- Lack of transparency.
- Human errors.

---

### **Smart Lender Solution**

The Smart Lender system addresses these challenges by:

- Automating loan eligibility prediction.
- Using machine learning algorithms.
- Providing instant prediction results.
- Reducing manual verification.
- Improving consistency and efficiency.

---

### **Expected Outcome**

Customers receive faster, more reliable, and data-driven loan eligibility predictions, improving both user experience and banking efficiency.
